

ABSTRACT

An object is to transfer a concavo-convex pattern formed on the surface of a transfer die onto a transfer target accurately. A pattern transfer apparatus according to the 5 present invention is one for putting a transfer die having a concavo-convex pattern against a transfer target on a substrate to transfer the concavo-convex pattern onto a surface of the transfer target. It is characterized by comprising pressing means for pressing the transfer die 10 against the transfer target on the substrate at a plurality of different locations independently.
